

ReLKD: Inter-Class Relation Learning with Knowledge Distillation for Generalized Category Discovery

– Supplementary Material –

1 Warm-up of KDM

We evaluated when KDM should be introduced into ReLKD. Since the KDM needs to distill the information learned at the coarse-grained level to the target-grained level, we allow the CGM to be trained for a certain time period before proceeding to the KDM. We set different start/end time points for KDM (denoted as T_{t2c}^{start} and T_{t2c}^{end}) on the CIFAR-100 validation set and calculate the corresponding *ACC*s. The results in Table 1 show that the time of introducing KDM has little effect on the performance of ReLKD.

Table 1: Warmup experiments with KDM.

T_{t2c}^{start}	T_{t2c}^{end}	All	Seen	Novel
90	120	81.8	82.1	80.6
120	135	81.8	81.4	83.3
120	150	82.6	82.1	84.5
120	180	81.9	81.4	83.6
150	180	<u>82.2</u>	81.7	<u>84.1</u>
